

Minnesota Pollution Control Agency

September 29, 1995

Mr. Al Gabien
U.S. Environmental Protection Agency, Region 5
77 West Jackson Street
Chicago, Illinois 60604

Re: Potentially Responsible Party Searches on PA/SI Sites

Dear Mr. Gabien:

Please find enclosed copies of potentially responsible party search (PRP) reports that have been prepared as part of an integrated sites assessment process. The PRP reports are intended to accelerate the Superfund enforcement process and maximize the number of site investigations and cleanups conducted by responsible parties. The attached reports concern the following sites in Minnesota:

Northwest Adrian Municipal Well Contamination Site, Adrian, Minnesota;
Beardsley Municipal Well Contamination Site, Beardsley, Minnesota;
Northeast Hastings Ground Water Contamination Site, Hastings, Minnesota;
Central Northfield Ground Water Contamination Site, Northfield, Minnesota; and
the Fridley Municipal Well Contamination Site, Fridley, Minnesota.

If you have any questions about this letter of the attached reports, please call me at (612) 296-8353.

Sincerely,

Jeff Buss
Potentially Responsible Party Search Specialist
Site Assessment Unit
Site Response Section
Ground Water Solid Waste Division

Office Memorandum

DATE: September 29, 1995

TO: Ron Swenson, Supervisor
Site Assessment Unit
Ground Water Solid Waste Division

FROM: Jeff Buss, PRP Search Specialist *JLB*
Site Assessment Unit
Ground Water Solid Waste Division

PHONE: 296-8353

SUBJECT: Fridley Municipal Wellfield Site (Site)

This memorandum describes the past, commercial usage of the above-mentioned site (Site), as well as adjacent properties. This information is to be used as part of the Integrated Assessment process leading to the possible listing of this site on the Minnesota Permanent List of Priorities. Any information identifying potentially responsible parties (PRPs) for this site should be treated as nonpublic as described in the Minnesota Data Practices Act, Minn. Stat. § 13.39. This information shall become public when the Minnesota Pollution Control Agency (MPCA) has concluded its PRP investigation.

This memorandum is divided into six sections: 1) a summary of contaminants found at the Site; 2) a review of potential contamination sources located near, or associated with, the Site; 3) Cole's directory information describing businesses located near the Site; 4) Sanborn insurance maps of the Site and adjacent properties; 5) a title search of the Site (if applicable); and 6) a conclusion summarizing the information from the first five sections. The Preliminary Assessment Executive Summary for the Site can be found in Attachment 1 to this memo.

I. Summary of Contaminants found at the Site

1,1,2 Trichloroethene: used as a solvent for fats, waxes, natural resins and alkaloids.

Source: Merck Index, Eleventh Edition.

Contaminants detected in the city wells include: methyl isobutyl ketone, methyl ethyl ketone, 1,1,2 trichloroethane, 1,1,1,2 tetrachloroethene, 1,1,1 trichloroethane, o-xylene, cis-1,2 dichloroethene, and 1,1 dichloroethane.

II. Review of Hazardous Waste Manifests and Licenses

A. Hazardous Waste Generators

A review of the MPCA's Hazardous Waste Management Information System (HWIMS) data base revealed 142 hazardous waste generators currently operating in the city of Fridley. Seventeen are located within approximately one mile of the Site, including two dry-cleaners (a HWIMS list and manifests for the dry-cleaners are located in Attachment 2).

B. Spills Information

A review of the MPCA's spills data base revealed 59 leaksites in the city of Fridley (Attachment 3). Of these spills, the leaksites at Fridley High School, Fridley Middle School, Hayes Elementary School, Sinclair Service Station, and Total Petroleum are near the Site.

C. Solid Waste Facilities

The Minnesota Open Dump Inventory (ODI) identifies eighteen separate dumps, waste sites, and locations of "hot line" complaints of waste disposal in the city of Fridley. The Moore Lake Dump is the only site in the ODI located near the Site. According to a 1981 MPCA Solid Waste Section inspection report, the Moore Lake Dump was privately operated by a hog farmer who fed garbage to his hogs. The dump closed in the mid 1940's and homes are currently built upon the dump (see Attachment 4).

III. Cole's Directory Information

To learn more about the types of businesses that operated in the city of Fridley, I reviewed local telephone directories for the years 1950, 1957 and 1963. Additionally, I reviewed "An Invitation to Industry" published by the city of Fridley in 1963 (see Attachment 5). Based on my review of these sources, it appears that there was little industrial activity near the Site. The most common businesses near the Site were garages and gas stations located on University Avenue and Main Street, to the west of the Site.

IV. Sanborn Insurance Maps

The Minnesota Historical Society does not have Sanborn insurance maps for the city of Fridley.

Ron Swenson, Supervisor
Page 3
September 29, 1995

V. Title Search

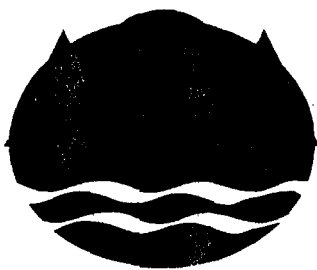

A title search was not conducted for this site because the source of the contamination is believed to originate off site.

VI. Conclusion

Although there is a large number of waste sites, leaksites, and hazardous waste generators in the city of Fridley, the area surrounding the Site is mostly residential. Most businesses near the site are located on Main Street and University Avenue, to the west of the Site. As a result, I would recommend a more focused examination of businesses such as garages and dry-cleaners that operated along the major streets and avenues near the Site.

PRELIMINARY ASSESSMENT NARRATIVE SUMMARY

Fridley Commons Park Well Field

August 9, 1991
MND985701309

The Fridley Commons Park Well Field (Site) is located in the city of Fridley, Anoka County. The Site is about 50 acres in area and consists of several outdoor ballfields, tennis courts, playground, hockey rinks, and a high school. Eight municipal supply wells are located on the Site. The oldest well was drilled in 1961. Surrounding land use is largely residential with commercial/industrial business.

In February 1984, trichloroethene (TCE) was detected at a level of 11 ug/l in city well #9, a Prairie du Chien bedrock well located well field. At the time, TCE was not detected in water blended with other wells in the well field. Subsequent testing revealed four bedrock municipal supply wells in the well field were contaminated with low levels of volatile organic compounds, including TCE. In November 1989, water blended from the well field was found to exceed the Maximum Contaminant Level (MCL) of 5 ug/l for TCE, and City Well #9 was taken out of service.

Contaminants detected in city wells in the Commons Park Well Field include volatile organic compound, some which are associated with industrial solvents. These chemicals include 1,1,2 trichloroethene (TCE); methyl isobutyl ketone; methyl ethyl ketone; 1,1,2 trichloroethane; 1,1,2,2 tetrachloroethene; 1,1,1 trichloroethane; o-xylene; cis-1,2 dichloroethene; and 1,1 dichloroethane.

To date, a source of the contaminated ground water has not been identified, but is believed to originate off-site. A search of MPCA records has identified approximately 50 potential contaminant sources in the surrounding area. The city of Fridley has hired an environmental consultant and has installed three glacial drift monitoring wells in the well field to further assess the situation.

The Site is located within the Twin Cities Basin, a structural geologic depression consisting of over 1,000 feet of Precambrian and Paleozoic sedimentary rock strata, mantled by over 100 feet of unconsolidated glacial drift.

The major aquifer in the region is the Prairie du Chien - Jordan Aquifer, consisting of dolostone and sandstone units. Wells in the Fridley Commons Park Well Field are open to the Mt. Simon Sandstone and Prairie du Chien Group. The well field provides water to a population of about 29,000. Other municipal and community water supplies located within a four-mile radius of the Site include Arden Manor Mobile Park, Blaine, Brooklyn Center, Brooklyn Park, Fridley Terrace Mobile Park, Mounds View, New Brighton, St. Anthony, and Spring Lake Park.

For persons who are hearing and speech impaired, call: TDD (612) 297-5353.

Regional ground water discharges to the Mississippi River approximately one and one-half miles southwest of the Site, although local ground water flow in the glacial drift appear influenced by pumping effects. Drinking water intakes along the Mississippi River for the city of Minneapolis are located approximately three miles downgradient/downstream from the Site.

Long distance transport of similar contaminants and hydrogeologic conditions in the area has already been documented. Thus, there is a possibility for contaminants to enter the Mississippi River via ground water discharge; however, dilution would be large.

Transport of contaminants to surface water bodies via storm water runoff is not considered reasonable given the subterranean nature of the ground water plume. Ground water discharge to nearby Moore Lake is not likely, given that the depth lake level appears to be perched above the glacial drift water table.

The source of contaminated ground water is believed to originate off-site. Therefore, it is not possible to identify areas of suspected soil contamination. Because the observed release of contaminants to ground water occurs over a hundred feet below the ground surface, it is assumed contaminated soils do not exist on-site.

Similarly, the release of contaminants to air is not suspected.

The major impact of the contamination is in regard to a potential public health risk via contaminated well water. The city of Fridley has taken well #9 out of service due to contamination and continues to monitor the other wells in the well field.

Description of Violation (s)

- old dump site supposedly located along the west edge of Moore Lake
 - homes are now built on top
 - an [redacted] ran this private dump, information indicates he was a hog farmer who fed garbage to his hogs
 - site closed in mid-40's and the operator supposedly moved to the Hilltop Drive in Theater area.

Violations of Special Permit Conditions

Pictures Taken ☒ Description 2, of lake edge where filling supposedly occurred.

The present-day city of Fridley once comprised a part of the area called Manomin (Wild Rice). The first record found of this area dates back to 1847 when a John Banfill made his claim and became the first settler.

The first family to come to Manomin was the Abram Fridley family. Major Fridley, as he was called, acted as an agent for the Hudson Bay Company during the 1850s trading for furs with the Indians. Another early settler was Henry Rice. The beautiful Rice Creek now bears his name.

In 1857, Ramsey County was divided. The upper part became Manomin and Anoka Counties. Major Fridley then became the Chairman of the Manomin County Board of Commissioners.

In April, 1870, a petition signed by a majority of the voters of Manomin County requested the formation of a township, and it was granted. The name Manomin was adopted for the town, but changed to Fridley in 1879 by the act of the State Legislature.

John Banfill and Major Fridley were both very active in the early government of Minnesota. Mr. Banfill was the first State Auditor and also a Senator in the first State Legislature. Major Fridley was an active member of the State Legislature until his death in 1888.

In 1871, the business section included a feed and flour mill, the Manomin Hotel, and a large starch factory. In 1887, a building boom started. Two depots were built for the Great Northern and Northern Pacific Railroads. A large pump works and a plow factory were erected.

Although it is recorded that \$4 million dollars worth of real estate holdings changed hands within one year, the city failed as an industrial center because of its competition with the metropolitan centers of Minneapolis and Saint Paul.

The factories closed and business slumped, Fridley reverting to its quiet and peaceful existence.

During the late '30s and early '40s, a new surge of industrial expansion was felt in the Fridley area. It soon became obvious that some controls were needed and zoning ordinances were adopted to regulate building in the area.

This led to the incorporation of the village of Fridley in July, 1949.

HISTORY
- contd.

In 1949, the center portion of the old Fridley Township was incorporated as the village of Fridley. It was governed first by a mayor and council of four; then in 1953, it was changed by election to a council-manager form.

By this time, Fridley had become a fast-growing residential area. The voters adopted a home rule charter in 1957, changing Fridley from a village to a city.

COMMUNITY
ATTITUDE

The City of Fridley is making a concerted effort to become an attractive location for new industrial plants. In the report, "Data on Fridley's Industrial and Commercial Advantages - January, 1960", official reception to new industry has been formalized by the following statement, "The Planning and Zoning Commission, together with the City Council, will cooperate in every way possible to meet the demands of industry coming into the area."

St. Metal Products, Inc.	Metal products	National	10-25

RESEARCH AND
DEVELOPMENT
INSTITUTE

In 1963, the North Star Research and Development Institute was founded in the Twin Cities. It is a nonprofit, independent research institute co-sponsored by the University of Minnesota and the Upper Midwest Research and Development Council. Its services include assisting organizations to:

- Develop an idea for a new product, process, or material.
- Improve an existing product, process, or material.
- Find a more efficient method of producing an old product.
- Adapt principles of an existing product, process, or by-product for use in a wide range of industries.
- Bring an objective or fresh approach to an old problem.

RESEARCH AND
DEVELOPMENT
INSTITUTE
- contd.

Utilize technical facilities and equipment not available in its own laboratory.
Supplement its own research staff on a short-term basis with experts in specific areas.
Explore a new area of technology without incurring the expense of facilities, personnel, and equipment.
Challenge the thinking of its own professional staff through interchange of ideas with North Star's multi-disciplined staff.
Perform research on a specific problem at less cost than possible in its own laboratory.
Provide management, marketing, and systems assistance in addition to scientific research.
Utilize a team of specialists, each experienced in a different discipline, equipped to approach a single problem from many viewpoints.

A team of highly-trained specialists drawn from industry and centers of learning direct North Star's professional staff. Research directors hold graduate degrees in their particular discipline - most of them Ph.D. degrees. The professional staff is assisted by a qualified group of supporting and service personnel. Further information may be obtained from

Dr. John W. Clegg, President

BUILDING AND
ZONING
REGULATIONS

Fridley enforces the standard building code plus city addenda. Zoning classification are:

<u>District</u>	<u>Acreage</u>	<u>%</u>
R-1 residential	2,593.03	51.28
R-2 limited multiple dwelling	125.79	2.49
R-3 general multiple dwelling	183.18	3.62
P public lands and facilities	216.23	4.28
C-1 local business districts and		
C-1s local shopping center districts	68.63	1.36
C-2 general business districts and		
C-2s general shopping center districts	208.82	4.13
M-1 light industrial	229.45	4.54
M-2 heavy industrial	<u>1,431.37</u>	<u>28.30</u>
	5,056.50	100.00

WATER AND SEWAGE

Municipal water and sanitary sewerage services are available throughout the city. The city owns and operates the water system; the sewerage system is part of the Minneapolis-St. Paul sanitary district. Underground water for processing is plentiful in the Fridley area.
